

Thomas Concrete partners in the debut of a concrete mix infused with cellulosic nanomaterial

December 6, 2018

Thomas Concrete of South Carolina, Inc. is proud to partner with the U.S. Endowment for Forestry and Communities, Harper General Contractors, and SynTerra Corporation in the largest commercial debut of a concrete mix infused with cellulosic nanomaterial, derived from low-value wood.

When added to concrete, the cellulosic nanomaterial, or CN, has been shown to enhance strength with less cement, and aid in the sustainable management of forests, according to testing from Oregon State University and Purdue University.

This exciting test performance took place in Greenville, South Carolina on December 6, 2018.
